SITES FULL VERSION only WIDGETS:

Widget	Short Description	Territorial availability (x = worldwide)
Embed	Our all-round talent handles every type of external content integration. Potential applications include online shops such as Amazon® aStore as well as content syndication or third party business services.	x
Driving Directions (with up to 250 requests per month)	Website owners can display their business location on an interactive map. Additionally, they have the option to provide visitors with detailed driving directions. To offer this service we have licensed Microsoft's Bing™ Maps for enterprises.	limited to the geographical areas covered by Microsoft's map service "Bing maps for enterprises"
Bookatonce	In cooperation with Bookatonce, a specialist for web-based hotel management software, we developed this online booking widget. Customers of Bookatonce can easily integrate both the online hotel reservation service and an availability calendar into their website.	limited to the geographical areas covered by bookatonce.com
booking.com	In cooperation with booking.com, the world leader in booking accommodations online, we developed this online booking widget. Hotel owners can easily integrate a booking button into their website that	x

	checks room availability and connects to booking.com.	
Open Table	This widget was exclusively developed for our partner OpenTable®. It enables visitors to conveniently book a table while they are on the website – no extra call or email necessary.	limited to the geographical areas covered by opentable.com
Ebay	Integrates a choice of eBay products within the website. Based on a given seller ID or shop ID or keyword based search results.	x
Ebay Product	Integrates a single eBay product within the website based on a given product ID.	x
Shopping Cart	Users can set up their own entry level online shop with different payment methods including PayPal®. The layout automatically fits to the chosen CM4all Sites website design.	x
ActCloud!	Integrates a contact form into the website that automatically sends all requests to a configurable incoming queue within the ACTCloud! CRM system.	x
Ecwid Store	Enables a seamlessly integration (embed) of Ecwid shops via a given Ecwid Store ID or to create a new Ecwid Store.	x
Languages	Users can select a number of languages by their flag that will be shown within the website. Each flag can link to an internal page or external website.	x
phpBB3	Enables the integration of the open source PHP Bulletin Board. The widget comes with pre-configured configurations for a publicly accessible forum and a forum only accessible by registered users. In the latter case, visitors can register directly on the website. In addition, the standard board language, standard e-mail address, and an admin password for logging in via the live website can be set by the website owner.	x
Blog	Integrates a blog (based on open source Flatpress software) within the website with a number of configuration options. The user can write blog posts by logging in on the live website.	x
